Acme Robotics - Company Overview

Acme Robotics was founded in 2014 by Priya Sharma and Daniel Cho in Pune, India. The company builds autonomous warehouse robots that help e-commerce companies pick and pack orders faster.

In 2023, Acme Robotics reported annual revenue of 42 million dollars, a 35 percent increase from the previous year. The company employs 310 people across offices in Pune, Berlin, and Austin.

Acme Robotics flagship product is the FetchBot 3000, a warehouse robot capable of navigating narrow aisles and lifting up to 25 kilograms. The FetchBot 3000 was launched in March 2022 and is currently used by over 80 warehouses worldwide.

The company's CEO, Priya Sharma, has stated that Acme Robotics plans to expand into the European grocery distribution market by the end of 2026. Acme Robotics raised a Series C funding round of 60 million dollars in early 2024, led by Northbridge Ventures.
